Business Process and Change Management Core Deployments Strategies

Monitoring Corporate Business Plans accurately and on real-time !

All my 30 years of experiences combined, resulted on **quickly deploying an automated monitoring** of the critical GLOBAL Business Plans and all Business AREA's Processes Performances, accurately and on real-time.

Always efficiently focusing on guaranteeing **Processes Compliance, Quality Assurance, SOX Compliances and Risk Management**; therefore providing coverage to the needed Change Management Readiness, for both, teams and systems.

WHAT IS TO BE ACHIEVED

Corporate KEY ALERTS are mapped on both **Core and Satellite Systems** throughout each **Business Area's Process Assessments**, induced by building-up complex and accurate data extractions which, in turn, **transform such data into relevant information** to be appropriately monitored real-time. Margins are set to this information as to **level the safety ratings** at which these alerts are to be considered (or not) real action-plans to be carried out prior to potential exposures.

Each chosen Business Area's KEY ALERTS plays an important role to compose the **GLOBAL ALERTS**, which will basically and instantly become the FOUNDATION to monitor your Corporation's **GLOBAL Business Plan Performance**. Accurately and on real-time !!!

The SOLID BASIS to a continuous **PROOF OF CONCEPT** for your own Corporation's stakeholders and/or investors expectancies.

BPM and Change Management Programs, just the suitable size you need !

I have tailored **BPM Techniques and Change Management Training Modules**, which can be applied immediately by all sizes of companies or projects, including small and mid-sized.

I am able to adapt, format and customize **CHANGE MANAGEMENT Programs** for each individual company or specific project, no matter the complexity.

IN-COMPANY KNOWLEDGE TRANSFERENCE

I possess the expertise to **guide, adjust, transfer all the knowledge, train and orient** your company's teams to accomplish, **ON THEIR OWN**, such CHANGE READINESS Programs.

And of course, I will hold on being co-responsible for whichever the outcome. I definitely will !

Business Process and Change Management Core Deployments Strategies

HOW THIS CAN BE ACHIEVED

Below a demonstration on how top strategic and executive decision-making processes can be supported by periodic accurate data extractions, on the tactical and operational levels.

- We must take advantage of the most knowledgeable **Focal Points and Key Users** as to supply us their profound experiences. During their careers, they have gone through all kinds of potential errors or assumptions; and took all the necessary Action Plans to solve those issues. They KNOW how each AREA'S BUSINESS PROCESS **should perform** and HOW all this **can be supported** by the entire platform: both CORE and Satellite Systems together with all other available tools and functionalities.
- There are **Universal IT Methodologies ***, with lots of nicknames and abbreviations. They exist in a very complex variety of formats. And these methodologies are there for a purpose, so that we know and learn what to monitor.
- Once we know what to map; such information will induce **Testing Scenarios and Prototyping Simulations** that must be compliant with the available system platform and will precisely respond on its full extent. Everything must be covered guaranteeing, not only the RISKS; but also that all the KEY ALERTS, which have been mapped, guarantee accurate and real-time monitoring of such alerts aligned within the **Corporation's GLOBAL Business Plans** designs.

Please, if you may, this short video emphasizes how crucial meaningful data extractions are:

https://www.integradoresolucoes.com.br/bpa_bpm_and_change_management_transcripts.pdf

For more details on these **IT Universal Methodologies** (please, see through the ROADMAP Section):
<https://www.integradoresolucoes.com.br/bpa/>

Process Compliance ® : effectively designed Business Process Assessment Methodologies (BPM) world-widely applied in Information Technology. i.e.: Application Landscapes, Process Walk-Throughs, Frames of Reference, Acceptance and Usability Testings *.

I'll be honored with an interview at any time.
